                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     26
                                           POSSIBLY A REGULATORY FUNCTION IN BURKITT LYMPHOM LYMPHOMAGENESIS AND/OR B-CELL DIFFERENTIATION. IT CANDIDATE FOR CELL-CELL INTERACTION, AND ACTIVATI LYMPHOCYTES IN LYMPHATIC TISSUES.

SUBCELLULAR LOCATION: Integral membrane protein. ALTERNATIVE PRODUCTS: 2 ISOFORMS; A LONG FORM (SH SHORT FORM, ARE PRODUCED BY ALTERNATIVE SPLICING. TISSUE SPECIFICITY: EXPRESSION IN MATURE B-CELLS
                                                                                                                                                                                        ACXCKS. (ACXCKS. (ACXCKS).

SXP. Med. 187:655-660(1998).

FUNCTION: CYTOKINE RECEPTOR THAT BINDS TO BLC. BLRL BETT LYMPHOMA (BETTT)

FUNCTION: OF REGULATORY FUNCTION IN BURKITT LYMPHOMA (BETTT)

FOR THE PROPERTY OF THE PRO

                                                                            BIOI. Chem. 267:16283-16287(1992).

FUNCTION: RECEPTOR TO INTERLEUKIN'8, WHICH IS A POWERFUL FUNCTION: RECEPTOR TO INTERLEUKIN'8, WHICH IS A POWERFUL NEUTROPHILS CHEMOTACTIC FACTOR. BINDING OF IL-8 TO THE RECEPTOR CAUSES ACTIVATION OF NEUTROPHILS. THIS RESPONSE IS MEDIATED VIA G-PROTEIN THAT ACTIVATE A PHOSPHATIDYLINOSITOL-CALCIUM SECOND MESSENGER SYSTEM. THIS RECEPTOR BINDS TO IL-8 WITH A HIGH AFFINITY AND TO GRO/MGSA AND NAP-2 ALSO WITH A HIGH AFFINITY.

SUBCELLULAR LOCATION: Integral membrane protein.

SIMILARITY: BELONGS TO FAMILY 1 OF G-PROTEIN COUPLED RECEPTORS.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       CAUSES ACTIVATION OF NEUTROPHILS. THIS RESPONSE IS MEDIATED VIA A G-PROTEIN THAT ACTIVATE A PHOSPHATIDYLINOSTIOL-CALCIUM SECOND MESSENGER SYSTEM. THIS RECEPTOR BINDS TO IL-8 WITH A HIGH AFFINITY AND TO GRO, MUSA AND NAP-2 ALSO WITH A HIGH AFFINITY.

SUBCELLULAR LOCATION: Integral membrane protein.

SIMILARITY: BELONGS TO FAMILY 1 OF G-PROTEIN COUPLED RECEPTORS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              the Swiss Institute of Bioinformatics

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           SEQUENCE FROM N.A.,
                                                                                                                                                                                                                                                                      interleukin-8.
                                                                                                                                                                                                                                                                                                                                                                                    6
FUNCTION: RECEPTOR TO INTERLEUKIN-8, WHICH IS A POWERFUL NEUTROPHILS CHEMOTACTIC FACTOR. BINDING OF IL-8 TO THE RECEPTOR CAUSES ACTIVATION OF NEUTROPHILS. THIS RESPONSE IS MEDIATED VIA A G-PROTEIN THAT ACTIVATE A PHOSPHATIDVLINOSITOL-CALCIUM SECOND MESSENGER SYSTEM. THIS RECEPTOR BINDS TO IL-8 WITH A HIGH AFFINITY AND TO MGSA (GRO) WITH A LOW AFFINITY.

SUBCELLULAR LOCATION: Integral membrane protein.

SUBCELLULAR LOCATION: TO FAMILY 1 OF G-PROTEIN COUPLED RECEPTORS.

SUBCELLULAR LOCATION: NOTE-CD guide CDw128a entry:

J. Biol. Chem. 271:32770-32776(1996).
I. FUNCTION: RECEPTOR TO INTERLEUKIN-8, WHICH IS A POWERFUL NEUTROPHILS CHEMOTACTIC FACTOR. BINDING OF IL-8 TO THE RECEPTOR CAUSES ACTIVATION OF NEUTROPHILS. THIS RESPONSE IS MEDIATED VIA G-PROTEIN THAT ACTIVATE A PHOSPHATIDYLINOSITOL-CALCIUM SECOND MESSENGER SYSTEM. THIS RECEPTOR BINDS TO IL-8 WITH A HIGH AFFINITY.

AND TO GRO/MGSA AND NAP-2 ALSO WITH A HIGH AFFINITY.

   Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
